

SHOPIFY REPLATFORM · WT FARLEY × MAKRO

The QA walkthrough.

A tour of the store as it stands today: what we tested, what we found and fixed, and exactly what to click so your team can validate each feature and sign it off.

DATE

July 22, 2026

DURATION

30 to 40 minutes

STORE

wt-farley.myshopify.com

WHERE WE ARE

Everything a shopper can touch is live on the store.

Data migration	Done	827 products, 92 collections, 11,274 customers, 17,054 historical orders. Counts verified exactly.
Storefront build	Done	Header, mega menu, search, collection pages, product pages, cart, content pages, forms.
Product configurator	Done	31 configurable products live. 8 more built, held until content is confirmed.
Part-number lookup	Done	Header lookup, on-page lookup, and deep links that prefill a configuration.
Store owner's guide	Done	17-page guide to running the store, written for your team.
Launch tasks	Ahead	Domain cutover, analytics confirmation, final redirect map, launch checklist.

Three test passes, then everything re-checked this morning.

01 · ENGINE AND DATA

Every option, against the old site

All 40 configurable products compared to the legacy export: option groups, choices, part codes, and price add-ons exact to the cent. Over 1,500 choices validated.

02 · STOREFRONT

Every page type, crawled

Key pages, all 92 collections, menus, images, redirects, search, and cart checked over HTTP. Every fetched page scanned for template errors.

03 · HANDS ON

Every feature, clicked

Manual passes on each feature as it was built and again after each fix, plus the responsive layout at the theme's tablet and mobile breakpoints.

RE-RUN TODAY All 31 live configurators passed the automated re-check this morning: valid data, no empty required options, correct preview behavior, add to cart wired.

QA caught real issues. All of them are fixed and re-verified.

- | | | |
|----|--|----------------------|
| 01 | Air Hose configurator was missing its three core options (length, inlet, outlet), so it could not build a valid part number. | fixed and live |
| 02 | 15-Foot Coiled Air Hose had a required option with zero visible choices, which could block ordering. | fixed |
| 03 | MRI Vacuum Hose showed the outlet picker twice, risking an ambiguous part number. | fixed |
| 04 | Old site URLs had no redirects; after launch, saved links would have hit 404 pages. | 301s live |
| 05 | Two internal test products were visible to shoppers at a \$999,999 placeholder price. | removed |
| 06 | 34 migrated descriptions carried an old shipping notice with a wrong phone number, plus leftover Word markup. | cleaned |
| 07 | Configurator pages showed the product photo and pre-picked options before the shopper chose anything. | reworked today, live |
| 08 | Product cards downloaded full-screen images into card-size slots; desktop image transfer cut by half or better. | optimized today |

PART ONE

The configurator.

The heart of the store: 31 products where a shopper builds a hose, regulator, manifold or stand option by option, and the part number, price and preview build with them. We will click through three products together.

Build an oxygen hose, watch the preview assemble itself.

- 01 Open `/products/oxygen-hose`. Options sit behind the gas choice; part number and price show a dash.
- 02 Pick a gas type. The options reveal, and switching gas later swaps the whole product without a page reload.
- 03 Pick a hose length, inlet and outlet. The part number assembles piece by piece and the price climbs with each add-on.
- 04 Watch the image panel: the hose renders in layers, and the chosen fittings appear on the hose ends.
- 05 Add to cart. Open the cart: every selection is listed on the line item, with the finished part number.
- 06 Try adding with a required option missing: the page blocks it and scrolls you to the missing choice.

WHAT TO VALIDATE The part number matches what your team would quote for the same build, and the price matches your list plus add-ons.

Products no longer show a finished photo before you choose.

BEFORE

Photo and pre-picked options on load

The product photo showed immediately, even for a build-to-order product

Some options arrived pre-selected

Part number and price displayed before any choice was made

NOW, LIVE ON THE STORE

Nothing until the shopper chooses

Grey panel with product-specific text, e.g. "Select a Flow Rate to Preview Your Regulator"

No option pre-selected; part number and price start blank

First pick reveals the product photo; Reset returns to the grey panel

TRY IT Open `/products/15-foot-coiled-air-hose`. Confirm the grey panel, pick an inlet, watch the photo and part number appear, then hit Reset Configurator.

Color Coding changes the picture to the color you picked.

- 01 Open `/products/oxygen-standard-body-click-regulator`. Grey panel reads "Select a Flow Rate to Preview Your Regulator".
- 02 Pick a flow rate. The regulator photo appears and the part number starts building.
- 03 Open Color Coding and pick Green, then Blue, then Red. The photo swaps to the matching color each time.
- 04 Finish the remaining options and confirm the finished part number matches your catalog for that build.

SAME BEHAVIOR All four click regulators carry the color swap. Wall outlet manifolds show their gas artwork uncropped on the gas tiles, fixed this morning after your note.

A customer with a part number gets a ready-to-buy page.

PATH A · HEADER

Switch the header search to Lookup and enter a part number from an old invoice.

PATH B · PRODUCT PAGE

Use the "Have a part number?" bar at the top of any configurator page.

Both land on the right product with the configuration prefilled. A full part number fills every option; a partial one fills what it can and asks the shopper to complete the rest.

Entering a part number on the wrong product page routes to the right product automatically.

TWO NOTES Legacy composite part numbers resolve through suggestions rather than an exact match, because they never existed as single SKUs. And as of today, typing a part number into the regular search switches to Lookup automatically, so shoppers cannot land on an empty search page.

Eight areas to click through on the tour.

01 · HEADER Navigation Sticky header and menu Mega menu mirrors the old site structure Cart count updates live	02 · SEARCH Quick search Categories and products as you type Lookup toggle for part numbers Full results page with filters	03 · COLLECTIONS Category pages Banner, sticky filters and toolbar More products load as you scroll 18-card category grid on home	04 · PRODUCT PAGES Standard products Gallery, documents, specifications Pill-style option dropdowns Sticky add-to-cart bar
05 · CART Mini cart Slide-out with quantities Configurator selections on line items Straight into checkout	06 · CONTENT Pages About, FAQ, Terms Customer testimonials (20 quotes) Contact form	07 · DEALERS Dealer application Full application form Same fields as the old site's form Submissions land in Shopify	08 · TRUST Policies and consent Refund and legal pages Cookie consent banner Old links redirect to new pages

The same checks, one hand, smaller screen.

- 01 Open any configurator product. The layout stacks: preview panel on top, options below, and the grey panel and photo reveal behave the same.
- 02 Gas tiles wrap to three per row and stay aligned.
- 03 On a collection page, filters and the toolbar stay reachable while scrolling, and more products keep loading.
- 04 On a standard product, the sticky add-to-cart bar stays at hand as you scroll the page.
- 05 Menu, quick search and Lookup all work from the mobile header.

ASK We would like at least one pass from your team on an iPhone and one on Android as part of sign-off; the validation matrix in the QA report lists the exact rows.

OPEN ITEMS

What is still open, and who holds the ball.

Analytics (GA4)

Resolved

Runs through Shopify's Google and YouTube channel; no separate tag needed on the storefront.

Reviews app

Your call

Judge.me is installed; the original plan named Yotpo. Confirm the choice and where reviews show.

8 unpublished configurators

Your call

IV poles, equipment stands, nebbulator, coiled oxygen hose: built and ready, waiting on content confirmation.

Product content

Your call

24 products need descriptions after the legacy-notice cleanup; 2 products have no photo.

Duplicate SKUs

Your call

30 SKUs shared across products (brand cross-listings and one price conflict). Keep-or-merge call per case.

Redirect map extension

In progress

834 redirects for the old .html URLs built and verified against live pages; import queued before launch.

Lookup polish

Done today

Part-number searches now route to Lookup automatically; sample part numbers removed from the markup.

FROM HERE

Your turn to break it.

-
- | | |
|----|--|
| 01 | Walk the validation matrix in the QA report: one desktop browser and one phone per row, checking part numbers and prices against your catalog. |
|----|--|
-
- | | |
|----|--|
| 02 | Anything off: use the Report Issue tab on the right edge of the preview, or drop it in our shared thread. We triage daily. |
|----|--|
-
- | | |
|----|--|
| 03 | Send the open decisions back (reviews app, unpublished products, duplicate SKUs) so we can close them out. |
|----|--|
-
- | | |
|----|---|
| 04 | We close the launch items on our side: analytics, redirect map, lookup polish, then the launch checklist. |
|----|---|
-
-
-

Target: your validation pass within the week, then we lock the launch checklist together.
